

disy Cadenza

Integrated information management – reports, analyses and GIS

Giving data value

Rethink a more flexible use of technical and geodata.

Making information available anywhere any time

The demand for information and the obligation to provide information is growing on a daily basis for both companies and authorities. Information must be available quickly any time and any place. In other words: users should be able to flexibly search for and analyse technical data and geodata from every workplace. If required, the results should be easily made available to the public. We designed disy Cadenza to meet these requirements.

Comprehensive analyses and current databases are thus available at the push of a button. disy Cadenza understands to manage relational technical data as well as geodata. disy Cadenza has been in use for more than ten years now – on individual workstations as well as throughout organisations with several thousands of employees.

Building and adapting flexible report and analysis systems

disy Cadenza is a well-proven software product meant to build cross-organisational report and analysis systems. disy Cadenza allows users to search for, analyse and visualise data in several formats to quickly grasp its meaning. disy Cadenza is the only reporting tool that includes a fully-fledged geoinformation system – disy GISterm.

No one can foresee the problems a report and analysis system will have to deal with in the future. Company strategies must be adapted to reality, the obligation of authorities to report might change due to amending law. In the future, we might need completely different analyses than today.

Since disy Cadenza is a freely scalable tool, it can make flexible use of a database. This means that new questions might create work for an IT Department, but will not automatically lead to new and expensive IT projects with external service providers. This helps secure investments in the long run.

Data and functions where they are needed

Our customer's (geo)data is put at the centre of a Cadenza solution. In other words, disy Cadenza provides intelligent data management. The result: each employee is provided with exactly the data and tools required to carry out his/her task.

7 arguments for disy Cadenza:

- **Available from every workplace:** Every user can deploy disy Cadenza to perform web-based analyses using a browser.
- **Freely scalable report systems:** Individually prepared information for occasional users, experts, decision-makers.
- **Integrated data management:** Heterogeneous data from several sources can be analysed together.
- **Easy system maintenance:** Various configuration options for queries and analyses – without any programming.
- **Data protection and security:** Detailed authorisation management can be administered centrally and controls any access to data.
- **Secured investment:** The consistent use of standards makes users independent from providers.
- **Little administration costs:** All settings can be made centrally, no administrator required for the individual clients.
