

# Welcome to Disyland

We develop our core product Cadenza with enthusiasm and creativity, including a variety of individual Cadenza-based solutions with which we conquer the market. Our heart beats for data with a spatial dimension. Here we are breaking new ground by combining methods from the GIS and BI world. And we want more. We are looking for the right people who want to be successful together with us. We've got a lot planned, so take a close look because there's a lot going on.

## We're looking for you!

### Software Architect

**What inspires you?** Your heart beats for creative and flexible software architectures and you don't shy away from difficult technical challenges, often pushing the limits of what's feasible. You burn to make a big contribution to designing outstanding software and help us with the iterative, dynamic improvement of Disy's products. You help build the stable base of our products so that we can react quickly and flexibly to our clients' increasingly complex requirements and problems.

**What do we want from you?** You're the visionary and the strategist among the developers on your team. You have a very solid technical basis and wide-ranging experience with the Java platform – acquired across several years of professional experience – and together we will formulate a reliable understanding of our customers' relevant professional domains. Building on this and working with complex functional customer requirements, you will design enhancements and extensions, which will be incorporated into the existing products and bring them closer to our technical vision. You will ensure custom-tailored work preparation for the development team, identify and manage risks, and of course help implement new features as well.

**What can you expect from us?** We develop tools that our customers can use to extract the best possible information from their data. This in turn means better, longer-lasting decisions. Do you want to help with this? We offer you

- Software architecture in exciting "green" topic areas with social relevance
- Great design freedom for innovation in the development of outstanding IT solutions
- A lot of flexibility in how you work to allow for an optimal work/life balance
- And one of the most beautiful workplaces in Karlsruhe and the surrounding region, with outstanding public transport connections and secure bicycle parking

**Would you like to join us? A good decision!** Quickly send your application to [karriere@disy.net](mailto:karriere@disy.net). Tell us something about yourself, your professional desires and future ideas, and your motivation for applying to us in a short letter. We also need your CV with all relevant stations of your training and your previous professional life with the appropriate certificates.
